3 Days ago I started making master chief's armor from halo 2, I found a pretty inexpensive way, it uses paper modeling of life sized peices, then resining the peices to make them hard, then fiberglass and bondo, and of course some paint, several masterchief Suits out there are made this way, and are very durable and cheap to make.

I started making the helmet and came out with this (without resin or fiberglass applied yet, just the paper model)

It is a 90-95% accurate helmet and is life sized. The only problem is...I'm not 7 feet tall like masterchief is, so this helmet is way to large for me, I'm only 5 feet 8 inches tall. So now I will be spending ANOTHER 3 days making a better helmet and one that does fit.

After I complete the helmet, I will be making the full armor, it'll take me probably 1-2 months to make, but, the top image is a good achievement, cutting out 21 pages of paper, folding over 1000 folds, and glowing 300+ tabs.

EDIT: the helmet wont actually be finished since it is kinda too big, also, the spikey peices of paper where the visor should be are just tabs to attach a paper visor. I decided not to attach it because IF THIS WAS usable, then I would have used a real plastic visor from a motorcycle/dirt bike helmet.
