We on this earth to reproduce and fill the planet with little mini-me's in order to continue our species. I know someone will bring up the MSNBC article about how there are 1,500 known species that have exhibited homosexual activity. I want you to read the last three words of that sentence over again and think about them, "exhibited homosexual activity," this does not say "have a predominant role in the species society." The few cases they are able to note could easily be written off as an anomaly. I hope that being gay right now is just a fad, seriously its just wrong.

It is a natural anomaly, apparently.

It isn't thought up by humans, else animals wouldn't do it.

So, since it does happen in nature, why have such big problems with it? (and if you believe in god as the creator of everything, then he also created homosexuality)

I have nothing against homosexuals as long as they don't bother me with their sexual feelings.

They don't hate us for being heterosexual, do they?

Also, according to you, we should also kill/remove handicaps etc from society, as that is obviously wrong, there are so few that it is just an anomaly. (NOTE: this is just meant as example, not my opinion)

Wow... the "It happens in nature so it must be ok" argument.

I can't believe you actually support the idea of killing your own children (<http://en.allexperts.com/q/Wild-Animals-705/heard.htm>), Wife's murdering their husbands when they are done with them (http://en.wikipedia.org/wiki/Preying_mantis and http://en.wikipedia.org/wiki/Black_widow_spider).

Remember, those are natural too, so when humans do it, it should be ok! (Based solely on the "It happens in nature so it must be ok" argument, of course)
