Ghostshaw wrote on Wed, 03 October 2007 09:40erm 600+ watt? 500-550 is prolly enough... Especially if you get instead of the crappy AMD a Intel C2D Q9xxx or E9xxx series(they have lower energy usage).

-Ghost-

He wants SLI'd "512mb video cards", and by that he means at least 8800GTS 640mb cards. 500W is not enough. And none of the Qxxxx cards have "lower energy usage," they are quad cores and are on the top end of the energy usage scale.
