I have 5 serials but I wont be making them public.

To get past the installer use any serial that starts with 0669 and then find your serial in one of the ini's in the install directory and replace it with a valid standard renegade serial.

(/\ As you said, retying for search function...maybe one day one of you people will use it)

According to google someone said that Xwis lets any 0669 serial run a server now without a valid standard renegade serial but if it errors out then do the latter.
