Hey that host name is "VALID" it is a actuall player account setup in WOL (XWIS). Here i've even attached a screenshot...Funnily enough the account A000Hoste doesn't "Work" when i login using that account instead of my bat66wat6 account.

After logging in on A000Host it brings me to the server list screen as per usual but there is no servers in the list, it is blank!?
