Okay im not going to give u a life story or anyting here but about 1 year ago if not 8 months i took up the idea of attempting join the modding world of Renegade...i knew it would be tough but darn it, i have had to download like 8 new programs and i have to get familur with em all...

I aint angry or ought, i know it takes time, maybe im being a little impatient...tell you what ill "Tinker" around with RenX as you said and "Change the keys" as you said to see if it works-> But yet again umm, where and how do i change the keys? Lol i can;t even find RenX's directory, so i copy the Target from the shortcut on my dekstop and it leads to a invalid page on Google
