Ok thanx man! That saved me alot of agro...
But whilst i was on Game-Maps.net(Cool site) i found something called LUA, apparently it lets me make my own commands!
But after following the guys instructions it got to the bit "Edit LuaPlugin.lua to create your own LUA scripts."
How do i edit it? I mean i 2x click LuaPlugin.lua that's in my FDS folder and Windows don't know what program opens it....so im left going wtf do i do now?
Please help, this aint a major NEED 4 my server but it would make me really happy knowing i can make my own personalized commands
