Ok I've tried a few different things.

I got 4 headlights on my vehicle, 1 at front of each tread. Also I got 2 headlights on my front of the chassis.

At the left tread headlight I chose REN_HEADLIGHT and linked it to the tread, at the right tread headlight I took REN_HEADLIGHT and linked it to the origin.

At the left chassis headlight I chose SUN and linked to origin, at the right one I did the same but linked to v_chassis. Still when I enter vehicle in-game. No results... Someone know what's wrong?

Yes, I got the Dazzle.ini in my data folder.
