---

Here is my problem I start renegade I can hear sounds fine but I cannot see it I get the sounds of it starting and then the menu music and I can hear the mouse moving around on stuff but I cannot see it all I see is black and the computer I am using has been able to run renegade fine until now for some reason, I have not changed anything to do with video card lately(if you would like to see specs of computer ask)also when I start the computer up the screen kinda flickers funny then goes normal and that started just today I think so I'm think that could have something to do with it if anyone could help that would be greatly appreciated

PS. This computer is new only a month old I think
