i wanna make a skin for one of the charecter but instead of changing the color of the unit i wanna chance the whole look complelty

wat i mean is i got a picture of a blue bandanna and i wanna make the char whole body look like it

the problem is how can i make that pic take over the .dds file in phototshop without losing the form of the unit? if that makes any sence

like when i load the skin file i get (some) have spaces and the shape of a tank or char and when i add the pic i want it takes over the whole space i want it just to cover the picture and not the spaces like warping the pic around the body or somthing if that make sence?

please help this is a photoshop question
