So, some background information first: I used to play renegade all the time a couple years ago, and then I stopped around the time I bought a new computer. My Ren CD was in the old comp which i threw out, so I bought The First Decade package today. (Not just for Ren)

I installed Ren. CP1 and Renguard properly, and they work perfectly. The problem I am having occurs when I go to play online, I'll go to Advanced Game Listings and see all the servers, but when I join, I get the message of "Negotiating Port With Server". This Inevitably leads to an "Operation Has Timed Out" message.

Before I'm told to use the search button, let me say that I have, and have tried everything within it. I have disabled my firewall, I have configured my network to allow the correct ports (even though that should not matter with a disabled firewall), and I still get the same results.

What I am asking basically is, what am I missing here? Having tried everything so far on the forum, I now hope that I missed something or that someone has a solution that I have not tried as of yet.

Thanks in advance - Toter

P.S. - If it is of any help my comps' specs are as follows:

AMD Athlon 64 X2 Dual Core Processor 4200 + 2.21 GHz, 2 GB of RAM, NVIDIA GeForce 8800 GTX

Also my network is Linksys, and i use a Wireless Adapter to connect.
