What is the LuaPlugin? The LuaPlugin is a plugin for SSGM that allows plugins written in Lua to be loaded to the Renegade FDS.

After a few weeks of coding, tweaking, checking and double checking. I have finally released the LuaPlugin V3. It adds more functions, hooks and more functionality to your renegade FDS. You can create your own renegade scripts to add the the FDS. It also allows for Winsock to be used easily and supports multiple connections.
