Well it's a Dlink WBR-1310 router and I turned on Mac filtering(and put it on only allow the listed ones and put the three computers in there) a while ago haven't tried hotmail with that off I will try later.

EDIT: Wasn't that I can't really think of anything else I did other than blocking one site(wasn't hotmail.com of obviously).

2nd EDIT: Odd I had website filtering turned on to "deny access to list" and I had limewire.com that is all I had there, just thought I would try with it off, and now it works very odd.
