Yes, however it will take quite a magnet to pass distance from your mouse, down your desk, through a case, through another, 4-5mm thick case, to get to platters which are only effected by magnets within a 1mm range to do ANY damage what-so-ever.

I think you're forgetting that a hard drive contains two kinds of magnets, the perminent kind, and the electryomagnetic kind... Both are some of the strongest in the world, so why are you pointing that out?
