Ok well last night I was playing some ren on my usual server, (Baddog Gaming) playing away like usual and then my Ren just crashes so I press don't send error report and reload ren but this time as it joins the server it froze my ren and I couldn't leave. I tried ctrl alt delete but it wouldn't pop up. So I had no choice but to restart my computer. So now whenever I join that server I get the same problem, it just freezes as soon as its joins the server.

I loaded ren in windowed mode so I always had taskman open and ready just incase and this is what I get.

Ok i'm going to upload 2 crashdumps.

The first crashdump is from the original crash (The one that happened last night)

The second one is what I get when I try and loadup ren on that server.

Im using scripts 3.4.4. I've tried reinstalling them but it was to no avail. I can join other servers just not that one.
