---

hello thar, having trouble with installing scripts 3.4.4

What i got

- \* Clean install of renegade (from standalone ren)
- \* renguard installed
- \* manually updated to CP2

Downloaded scripts 3.4.4.

Extracted scripts.dll, bhs.dll, d3d8.dll, shaders.dll, sdbedit.exe and the new keycfg.exe

Run renegade, seems fine. try to start a game. and it crashed on the load screen. the beam goes across and stops at a certain point and the screen fades slightly and then the game crashes completly.

Now ive tried, updating my renegade with rend3d9 and running there d3d8.dll and the same but with the scripts d3d8.dll and it still does the same.

EDIT: that is in a lan game, but online i can join the game but my screen is completely black and i can still use F2 and F3 chat etc

any help would be appreciated.  
Thanks
