Im looking for a professional software thats like a recording studio....pretty much record audio tracks with a mic or add an existing audio track..

but be able to mix up and edit that tracks
like

-Mix More Then One Track Together
-Make Tracks repeat them self at some points (so i can get a beat and at the end it fades out....put it together to make the beat longer but fit in to it)
-Change the pitch and tone so at some parts of the audio tracks i can make the voice go higher or lower
-If possible maybe have a voice changer
-Basic crap...like reverse...add echo...etc
-Multiply effects
-Any Other Audio Editing You Can Think Of

Any professional software that can fit as much stuff i writing above will do....if anything hopefully it all and maybe more:D

i seen lot of cheaper ones that do maybe 1 thing i written above and another one does 1 more but i want a software that can do more then just 1 much as i can out of the list above

Please Please Please And Thank You
