In the options menu, there's a "performance" slider. The more u put it down, the more fps u'll get but the worse your game will look.

TBH: your video card is crap, it must be about 4 years old? That's almost as old as this game... Anyway, 30+ players is a lot as well. If you play in a bit smaller games, you won't have these FPS problems.

30 FPS should still be playable, though.
