bat66wat6 wrote on Wed, 30 January 2008 17:05 Okay. So i followed all of you guys advice.

I removed loads of ends leaving every command ending with just 1 end instead of

```
    end
  end
end
```

Now, i still have a problem though. The SS explains its current problems. One error says it wants an extra end at the end of a command sequence.

But if you look carefully it is saying all other sorts of crap like. Failed to load plugin "C:\Westwood\RenegadeFDs\Server\LuaPlugins" accesss denied!

I mean wtf? Access denied. Its all in the same directory.
What's going on guys?

Please, take a close look at each of the FDS's errors in the SS and try to tell me why it has that problem.

Cus im at a total loss.

go to line 24 and put in an "end", then hit enter
same for line 173

about permission denied.

are you sure you have a folder named LuaPlugins and in that folder there are NO SubFolders?
