Blazer wrote on Tue, 05 February 2008 15:45 I've had this problem 2 or 3 times in the past and each time replacing the power supply fixed it.

I assume those were el cheapo PSU's.

any decent PSU. Enermax, Antec, OCZ, Seasonic. Usally just dies and doesn't do anything. (If they die after a couple of years) el cheapo PSU's will give strange problems. even BSOD's in Windows just because it can't deliver a stable voltage to the other components in the PC. With all the qaud core, dual SLI, high energy taking graphics. A GOOD power supply is a must.
