Anyone notice this is the wrong section?

@Speedy059: Yea, you're right because my ISP gives us unlimited BW here (either that or a very VERY high bandwidth limit). I've not even been kicked off my internet for reaching a 'limit' so I'm assuming I've got unlimited. But I just don't have bandwidth to spare right now as I'm home hosting a couple other servers ^,^

Wireless router with one laptop connected to it.
Two computers "hard-wired" to my router. (one is linux-based)
A teamspeak server/ircd running off a Linux PC. I used to have a shoutcast server running but it was shit quality( not enough bandwidth  )

~Zack
