Heres the Tutorial: I used Google Translator:

Reduce the transmission rate

1st Click Start, click Control Panel, click on Network and Internet Connections, and then click Network Connections.

2nd Click on your dial-up connection, and then, under Network Tasks on settings of this connection.

3rd Click on the General tab, click in the box to connect via your modem and click on Configure.

4th Click the dialog box Maximum transfer rate (bit / s) in 9600 and then click OK twice.
