you know what, after reading all the reviews on quad core amds on newegg, i would say go with the 6400x2 amd the black box edition, get a good fan for about 20-30\$ and you should be fine untill early 2009 when amd is going to release the "fixed" version of their quad core processors. but then again my friends 9500 still beats my 5200x2 so im not sure anymore... i guess more opinions would be nice indeed, i know i am going to stay with this 5200x2 cpu for atleast another year as i dont see it being a bottleneck for my sustem... yet.

but i stand by the mvp mobo that i recommended earlier and the 8800gt does work ok for me, but for less money you can buy better ati card, so if you do take the mvp mobo make sure to get ati cards.
