Subject: Okay, this that and that, how do I do it.

Okay, I just made my server in with bones that I customized to how much damage it will make to a human, I guess I won't show you the file because it was originally a hack but I just want things realistic, one flaw, mostly just for humans, how can I make how much what weapons make what damage and to what.

I was wondering is there anyway to let someone have skins that they didn't have, like can they download it over Renegade?

How do you change the Purchase Terminal thing so you could buy a ssm on a map like walls or buy a computer character, or change your character to a NOD guy when your GDI.
