Hi,

I looked in BIOS and couldn't find any options reagrding the keyboard.

I Googled it and found this:

[http://en.wikipedia.org/wiki/Rollover\\_%28key%29](http://en.wikipedia.org/wiki/Rollover_%28key%29)

My keyboard is pretty good but I think it undergoes "jamming" as said in the article.

Should I just get a gaming keyboard with n-key (unlimited) rollover or can is there a suitable workaround with my existing keyboard?
