An alternative mounting it would be Virtual Clone Drive I think. And there are many ways to burn the iso on a CD:

-Extract it with Isobuster and burn a Data Disc with Nero (or any other burning tool). Use low speeds under 16x.

-Nero can burn isos itself without the need to extract them before.

-----

Check inside your computer if all the cables are plugged correctly. Replace the Data cables if necessary. If that doesn't work, replace your optical drive by another.
