Inside the server.ini, define a port for the server AND a port for the remote administration. Don't leave it to 0. Here are my settings which are working fine:

File Attachments
1) ports.jpg, downloaded 760 times

ID	Public Port	Private Port	Port Type	Host IP Address	
1	3333	3333	TCP	169.254.0.6	Delete This Setting
2	3333	3333	UDP	169.254.0.6	Delete This Setting
3	7000	7000	TCP	169.254.0.6	Delete This Setting
4	7000	7000	UDP	169.254.0.6	Delete This Setting

- Use the following form to add special port that you want to be opened for your special application

ID	Public Port	Private Port	Port Type	Host IP Address	
5			⊙ TCP ○ UDP		Add This Setting

Settings need to be saved to Flash and the system needs to be rebooted for changes to take effect.
