Okey now i've do this:

1. Installed renegade.
2. Installed patch 1.037
3. Installed renguard.

Now if i open renguard everything is oke it works

then he get to install cp2.. The begin is oke

but by 20 seconds he says Check your internet connection/firewal

and try again. But there is nothing wrong whit the connection and the firewal of my computer is still off.

Do i've to open a port in my router..?

Or do i've to download cp1 first? or is patch 1.037, cp1?

Greetz..

mikka
