<http://www.game-maps.net> is the popular website that supports and hosts Renegade files and mods based on the game.

At the site, you will find many categories for many different files and each week more are slowly added.

Most of the maps and skins are made into .exe files that will auto install to the default Renegade folder, which is C:/Program Files/Westwood/data, all you need to do is download and click to run.

If you installed the game to a other area of the computer, then the path is easy changed.
