Blazea58 wrote on Tue, 22 April 2008 02:59I think the limit on alpha blended meshes is somewhere around only 5000 polygons also, so getting something on a large scale that has alot of blending is a huge task. Roleplay 2 of course i split all blended meshes to below 5k, the rest of it is just seperated enough that it wont lag most people.

Thats the rp2 in current state and thats excluding everything added from level edit. Our current tests run at great fps.

There isn't such a limit, they just start running slowly
