Alright well, i have not played renegade in probably years... and i have a quick question... i remember there was something i had to do to get online.

I downloaded renguard but no client pops up like it used to, but the game2.exe did showup in my files, so i even tried opening with that... but pre- and post- renguard use, i couldnt create an online nickname for the game... it just keeps saying page wasnt loaded...

How do i create an online account?
