---

pretty much as it says in the title, i think one of the updates that i got was a vista sp1 for my 64bit vista home premium.

now every time i load renegade it gives me the loading screen and then it says "renegade has stopped working, a problem caused the program to stop working correctly, windows will close the program and notify you if a solution is available"  
it does this regardless if i have rg or not, i reinstalled renegade from scratch and it still does this. would reinstalling westwood online components do anything?

or is my only option to fixing this, is to remove all the updates or roll it back to like 2 months ago? (thats approximately the time when it stopped working) i just havent had time to look into it untill this weekend.

but then it will mean i cant get sp1 or my renegade will stop working?? does anyone else on this forum have vista 64bit and applied sp1 with no errors?

please help.

i have also tried to right click the shortcut button and selceting it to run in windows xp sp2 compatibility mode... to no effect.

for some reason "run as administrator" is grey and i cant click it, but i am the only user on this pc and i have admin rights so im not sure if it can affect it or not.
