Why are any of these fancy mice better than standard mice with a left click, right click and scroll wheel, apart from being able to scroll left and right? I can't even see THAT being useful, except when browsing web pages too large for your monitor, where you have to scroll right to view more of an image or something. But from the sounds of it, you guys with these fancy mice are loaded, and have probably been able to afford large monitors as well.

I've been using a standard white microsoft mouse for YEARS with no problems. The scroll wheel is useful when gaming to scroll between weapons and reload when clicked down.

standard, cheap, reliable microsoft mouse for the win.
