I go to "Advanced game listing" and renegade says that there's an update available that I should get. I click ok, and it says it can't create the download on my computer (not that the update would work on an already updated and ren-patched installation). I had this problem before and I reinstalled renegade and reupdated and re everythinged, but it was a pain in the ass. I just tried to play and I got this error again, anybody know a way to fix it without reinstalling everything again?

Thanks.
