With this I can also add mirrors for the downloads so multiple webmasters can volunteer to be mirrors for each files. THis will be a large database of all the files we can think of and also have mirrors for the downloads.

I'm going to need people to help upload files/screenshots/descriptions and anything else you can come up with. If there is anyone that can help, please let me know. I have the script installed and I need to give a few people accounts to help upload stuff. This is to big of a job for one person (me).
