Doitle wrote on Wed, 18 June 2008 09:18It is slow, a resource hog, and it will not accept that shockwave flash is installed. I've tried and tried, and restarted and tried. So much for viewing most websites now a days correctly...

Like any other company, they wanted to have a software download record and got caught up in the hype that they didn't polish their work.

Maybe when FF4 is released and not so much of a memory hog is when I'll use it.
