To answer Cavemans question, the anticheat consists of several parts. Part of it is improved (because we can also make clientside changes) BIATCH/RR code. Besides that theres a few extra things that weren't possible to do on the server side only.

I won't go deep into it now since its not all finished yet (although alot is finished though) so things might still change.

And WTF is this about?:

DrasticDR wrote on Sun, 22 June 2008 01:02Thank fuck you didn't get your hands on the source code.
