Hey all,

I was wondering if the patch is going to resolve the very annoying "Renegade Stopped Working" bug. I got this bug ever since I runned Vista, but maybe people of windows XP also got this bug. The bug in question is a very rare but not rare bug, one time he's there, the other time he's gone. I get this bug while starting up Renegade, most of the time full-screen, sometimes also running in windowed mode. I'm used to run another Full-screen game to fix this annoying bug. sometimes it's gone after running the other game(in this case, Guild Wars) but sometimes it won't disappear, does anybody know if the new patch is going to fix this, and if no then PLEASE can you do something to it, I really hate it when people ask me to join a server, and then find out I can't because of this annoying bug.

Greetings, K1llZ0ne

EDIT: I get the same message("Renegade Stopped Working") while running the mods Reborn, APB and since I'm a BHP tester, also AR)
