Renardin6 wrote on Sun, 22 June 2008 18:18: Good news.

Something that I wanted to see is not there so I will just mention it in case some genius can make this work:

Real Widescreen support. No stretched image when using 16/10 or 16/9 screen resolution.

Some people have been opposed to real widescreen support because it increases the horizontal FOV (and thus giving an unfair advantage to people with widescreen monitors)
