My dad is restoring a 1974 Kawasaki KZ900. It has a 160 speedo, and the guy that my dad bought it from said that he took it that fast. The gear ratio on that thing is insane. But they didn't put it on the KZ1000. If they did, it would have kicked the 900s ass so bad. \$4500 and you can have it.

*the carbs need major cleaning, the shims need to be redone, and one of the exhaust looks like crap.
