Hi,

Couldn't find an answer on my problem in other topics so here is my problem.

I installed Renegade (official version, bought in store(combat pack)) updated correctly, installed renguard.
and the game started correctly. i played fo a while and logged off.
(this to show it worked good)

now, when i start the game again i come in renguard (everything ok)
now i start Renegade, see the startup screen then my screen turns black and only the hourglass is showing. only immidate shutdown with power button works(dûh).

restart pc and try again don't work.
this is freaking me out sometimes.

who can help me?

Oh, and everything is up to date (also when in worked).

Chris
