The existing DC mechanism is a total piece of crap anyhow. If at all possible, it should be reworked so that it works through XWIS (directly jumping to that server's channel and showing the prejoin screen if possible) instead of bypassing it completely. This will goof up those who use DC/GSA to bypass the XWIS nickname restrictions (is the 9-char limit on nicks WOLAPI's fault or the XWIS Server's fault?), though.
