CarrierII wrote on Tue, 08 July 2008 03:47Yeah, sorry. It's the runtime execution protection thingy, relies on Windows specific calls or something similar. Mac has a version that runs on Linux, but won't release it because it has no protection. Just wait for TT's patch 1.038. Sorry.

So patch 1.038 will run it? Ok.

I don't get any lag for my FPS.

I guess it depends.. Lowest I usually ever see is 25-30... highest I ever see is about 75-80. Just depends.

I'm running an AMD 5400 w/ 4gb of ddr2 ram and an 8500gt.....

I see comparable FPS in Windows.. infact, I think I get higher FPS in Linux as opposed to Windows. I should go test that right now
