I'm very glad you brought this up because I've always played Renegade at its native 800x600, I believe, and always thought that changing it would cause more LAG...would going 1024X768, my windows resolution, cause lag or would it bring our "crisper" graphics, or what should I do? I play on a 10 year old 17inch regular CRT monitor by the way.
Thanks in advance...renohol
