APPLE WHORE DETECTED.

Seriously, he's pretty much right. It's all overhyped bullshit that a lot of other phones today can do, cheaper.

The reason Apple is so popular is that Steve Jobs geared his products toward the less computer savvy people in our world. Seriously, one of their ads depicts people proclaiming how retarded they are and how they were so stupid they couldn't navigate a PC- but miraculously, they seem to have been granted amazing skills with Macs from birth. It's stupid as hell.

Super post! It's right...they taking advantage of those who don't know much about comps. But I seen people do that same to those windows users...

Why would anyone buy something like this when it will be crap and outdated by this time next year? don;t they UNDERSTAND they are getting ripped off?

IT's the same deal with laptops too...GO BUY A DESKTOP! Laptops are for business users who are on the go. It is true super laptops for gaming and other media stuff like movie editing is coming out (Dell XPS laptop) but you can't upgrade it when the technology advances in like 18 months.

But in Desktops, you can upgrade and keep up with the industry. This whole iCrap is a just a waste of money...people getting ripped off bad. UNLESS...they really need the feauteres. You want to browse websites when you are in a train? Sure then by all means go for it! You want to check your e-mail of your office e-mail account? Sure then buy it...but other cheaper phones do the same. VerizonWireless for example...

This apple phone relies too much on hype to get sold...and then in two days, it will be hacked...hackers FTW!
