States the following

; FadeoutStart   - distance in meters where the halo and dazzle start to fade out
; FadeoutEnd   - distance in meters where the halo and dazzle are completely faded out

However, when getting further away from the dazzle than the FadeoutEnd distance. The brightness of said dazzle goes to 100% again, instead of 0%.

If I don't make sense, please tell, so I can post pics.
