I really doubt if you need a new CPU, the spec you posted above for her CPU (AMD Athlon 64 X2 Dual 2 GHz) is actually the same as my CPU, and I can run Renegade at a steady 70fps (my refresh rate) quite easily, with all graphics settings maxed out with scripts.dll 3.4.4.

Open task manager and look for ANYTHING that's using CPU time, and decide if you REALLY need it running while you are playing Renegade.
