Doitle wrote on Mon, 11 August 2008 01:32Are you seriously planning to use integrated audio?

It does make a difference, but now a days onboard audio isn't bad unless your a audiophile..tou'd probably hear the difference for hardcore games it might give that 1 or 2 fps extra. (If it does at all).

Nvidia Soundstorm used to be top knotch integrated audio found on the Nforce 2 chip.
