i put back the old dll files (left otehrs one sin dont thnik they do anything) and sitll nothing...when i run game2.exe in xp sp2 mode it works 10% of the time but does not load rr....its some wierd shit

with stewies reticle mod and edited dll file game2 does work but does not load RR without it i load game2 but gives me that error saying RR launcher wont load so with it game2 dont load rr and works without it game2 dont load with rr or without

EDIT: reinstalled ren with only patch+cp2+3.4.4+rr and still same errors
