CarrierII wrote on Mon, 11 August 2008 13:56I don't notice slips in sound when playing Ren and listening to music. I imagine a dual core or higher will easily take care of the extra load...

Like a couple of here saying onboard now a days is very decent.. I don't know where Doitle gets his info from but back in the days this was would have been true (With exception of that Nforce chip). Hell people with Qaud cores are hardly using there potential. Just run VMware ESX for the fun and youle see what I mean to unleas the true potential of suchs kind of beasts.
